**Idea 1-**

We combined all of our ideas to make a simplistic login page that enables users to enter their login details and a forgotten password link. The forgot password redirects to reset password page. This interaction is shown using a video.

Its strength is that it is not different from other login pages and so the user has a familiarity with the UX. Its highly feasible but not very original.

**Idea 2 –**

After the beginning page we get to signup page, which is shown with a simple UI. It has a terms and conditions page which is essential in such an application. The interaction is shown using a video below.

**Idea 3 –**

Our chatbot page shows originality because of the way we have structured the UX. Its gives a peaceful vibe with positive quotes and images.

The start chat button shows an interactive screen with many options that are not overwhelming. All is shown using an interactive video.
